DETAILED ACTION

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Any rejection or objection not reiterated in this Action is withdrawn.

Claim Objections

Claims 44-46 and 53-55 are objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form. Claims 44-46 depend from claim 43, which recites that the formula "B" represents non-locked nucleotide units. Each of these claims, however, recite that "B" comprises both non-locked and locked nucleotide units and thus broadens, rather than narrows, the scope of the claims. Claims 53-55 are objected to for the same reason due to their dependence from one of claims 44-46.

Response to arguments: Claim Rejections - 35 USC § 102 & § 103

Claims 43-46, 51-54 and 59-62 are rejected under 35 U.S.C. 102(b) as being anticipated by Wahlestedt et al. (of record). This rejection is maintained for the reasons set forth in the office action mailed November 3, 2005.

Claims 43-81 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wahlestedt et al. This rejection is maintained for the reasons set forth in the office action mailed November 3, 2005.

Applicants traverse the rejection over Wahlestedt et al. by arguing that Wahlestedt does not appear to disclose oligonucleotides with a region of non-locked nucleotide units at the 3' end. Applicant further argues that in contrast to the cited art applicant has demonstrated that addition of non-locked nucleotides to the 3' end provides a highly effective gapmer. Applicant further argues that the cited art does not disclose or motivate inclusion of the region D. Applicant's arguments are not persuasive because the disclosure of Wahlestedt does disclose oligonucleotides with this feature. The oligonucleotides of the invention are represented by the formula on page 8 of the reference. Wahlestedt discloses that the pattern of X-Y-X can be repeated, as indicated by the integer q, and because the integers m and p can be 0, this discloses oligonucleotides with the pattern X-Y-X-Y, meeting the limitations of the claims.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not

Art Unit: 1635

mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
